IBIE Booth 666

**WHEREFOUR ERP ADDS RECIPE CHANGES ON-THE-FLY FOR PRODUCTION
AND BAR CODE INVENTORY SELECTION ENHANCEMENT**

The cloud-based food and beverage traceability and ERP software also now integrates with Sage Intacct accounting software. The new features are being introduced at the International Baking industry Exhibition.

PETALUMA, Calif., Aug. 29, 2019 – Wherefour™ traceability and enterprise resource planning (ERP) software has added new features designed for additional flexibility and ease-of-use with the ability to modify recipes during production and to pull inventory via bar code scanning. Wherefour also now integrates with Sage Intacct® accounting software. These features are being introduced at the International Baking Industry Exhibition Sept. 8-11, Booth 666.

The new features are designed to help bakeries, beverage and other food and natural product producers manage processes more efficiently and in ways that they prefer, said CEO Matt Brown. The new bar code option allows inventory items to be physically selected, scanned on the warehouse floor and entered directly into Wherefour. Users still have the ability pick inventory from a computer or mobile device. With the new on-the-fly recipe change feature, system operators can quickly modify production steps, Brown said.

The Wherefour integration with Sage Intacct accounting software allows customers using that system to easily transfer invoices and purchase orders for enhanced cost of goods sold calculations. Wherefour also integrates with QuickBooks™ Desktop Pro, Premier, Enterprise, Manufacturing and Online systems.

“Many bakeries have variable daily production requirements, which can add more complexity for traceability and food safety considerations,” Brown said. “We wanted to enhance our software to help manage that effectively by better mimicking their real-world situations.”

More information about Wherefour is available at wherefour.com or by calling 415-930-4028.

About Wherefour, Inc.:

Wherefour, Inc., is a modern, simple to use and cost effective traceability software and enterprise resource planning (ERP) system. Wherefour is cloud-based, mobile-friendly and designed specifically for food, beverage and natural product producers. The software helps companies with inventory control, start-to-finish™ ingredient traceability, overhead costing, customer/vendor relationship management and blended inventory cost of goods sold. Wherefour is headquartered in Petaluma, Calif., and more information is available at wherefour.com or by calling 415-930-4028.

###

The screenshot displays the Wherefour software interface. At the top, there is a navigation bar with icons for Production, Formulas, Inventory, Customers, Vendors, and Reports. The main content area shows a 'WORK ORDER' for 'Make base cookie dough' with details such as Lot code 0477565-123, Work order date 08/27/19, and Assigned to Tracy Whitely. Below this, the recipe 'Cookie dough base recipe' is shown with a production multiplier of 1.0x and a note that the formula has been modified. A table of raw materials is displayed, including 'All purpose flour' and 'Organic butter'. The 'All purpose flour' table has columns for Pulled amount, Lot code, Barcode, On hand, Expiration, and Location. The 'Organic butter' row is partially visible at the bottom.

Pulled amount	Lot code	Barcode	On hand	Expiration	Location
100.0	WM001	WM-000001-18	100.0 pounds	09/26/19	details
25.5	WM002	WM-000002-18	375.0 pounds	09/11/19	details
0.0	WM003	WM-000003-18	185.0 pounds	09/16/19	details
0.0	WM004	WM-000004-18	750.0 pounds	09/18/19	details
